

Guide to instant email translation

Carrying out a translation in Microsoft Outlook

- The SDLDesktop Translation Toolbar is only visible when you are reading or writing an e-mail.
- In Microsoft Outlook you can only translate a complete e-mail. You cannot highlight sections of text to have them translated.
- You can choose to have your translation returned as an attachment to the original e-mail or have the text added to the original e-mail. You can do this by selecting “Add translation to the body of this message” or “Attach translation to this message” from the settings window.

Can I use the SDLDesktop Translator in Outlook Express

No. Outlook Express is not part of the Microsoft Office Suite. It only works in Microsoft Word and Microsoft Outlook.
